

SkinBella is a technological advancement beyond microdermabrasion. A non-invasive, Italian skin rejuvenation system utilizing an ultrasonic applicator. Unlike standard crystal microdermabrasion, diamond tip technology or other forms of exfoliation that employ abrasive mechanisms, SkinBella is extremely gentle.

SKINBELLA

Crystal-free microdermabrasion

SkinBella has four (4) piezoelectric transducers in the handpiece which produce ultrasonic vibrations. The high speed mechanical oscillation at 25,000 cycles per second, combined with liquid skincare products, creates controlled exfoliation. This action helps to effectively and safely remove the outer layers of the stratum corneum on all skin types.

SkinBella's ultrasonic applicator also offers options beyond exfoliation. The LED control panel allows the aesthetician to easily select each function and achieve precise settings for optimum results.

SkinBella provides immediate and visible results for luminous and healthy looking skin. Treatments can be performed as individual sessions or in conjunction with facial treatment programs.

SkinBella offers four advanced aesthetic functions:

Exfoliation

Produces a highly effective exfoliation to remove dead skin cells, excess oil and cosmetic residue. Pores are cleared, resulting in deeply cleansed, smooth skin. SkinBella is safe enough to use even on sensitive skin types such as rosacea and active acne.

Clearing

Accumulations of pigment and minor scarring can be smoothed and evened through a series of SkinBella sessions. Your specialized treatment serums are applied for maximum effectiveness, resulting in clearer and more even skintone.

Invigoration

Energize skin with the micro-massage of the ultrasonic applicator. Turns dull complexions into radiant, glowing skin.

Moisturization

Boost hydration levels by micronizing liquid treatment products for deeper penetration. Skin is left feeling soft, supple and youthful looking.

SkinBella advantages

- Non-invasive, only removes the stratum corneum
- Will not produce bleeding
- Provides an even exfoliation of all areas
- Does not use particulates or harsh chemicals
- No downtime following sessions
- Minimal redness
- No lifestyle changes required during program
- Clean, consistent exfoliation to revitalize the skin
- Immediate, visible results
- Skin is left with a youthful, radiant glow
- Inflamed blemishes can be exfoliated without risk of break-through bleeding
- Post-exfoliation extractions are minimized and can be easily performed
- Comfortable, moist peel
- Variety of advanced skincare services
- Suitable for all skin types
- Treats multiple skincare concerns
- Provides results beyond traditional Microdermabrasion and Chemical Peels
